

## **Internationale IBA-Konferenz „Chance: Bergbau - Folge - Landschaft“ vom 15.-17. September 2009 auf den IBA-Terrassen in Großräschen in Vorbereitung**

14.01.2009

Senftenberg. Neuland entdecken: Der Termin für die IBA-Konferenz „Chance: Bergbau - Folge - Landschaft“ vom 15.-17. September 2009 auf den IBA-Terrassen in Großräschen steht! Dort bietet sich die Plattform für einen internationalen Erfahrungsaustausch zu Bergbaufolgelandschaften. Die IBA hofft auf ein internationales und interdisziplinäres Publikum. The main issue of the Internationale Bauausstellung (IBA) Fürst-Pückler-Land are post-mining landscapes in a region in the eastern part of Germany near the polish boarder, the so called "Lausitz" (Lusatia). The region that has been characterised by lignite mining for decades was forced to develop new perspectives after the structural break in 1989/90. The IBA aims to create new landscapes with mining - landscapes that do not represent a denial of mining. These projects do not attempt to conceal the artificiality of the landscape, but to change it into a new hallmark of the region. The IBA-company is limited until 2010, and this year - one year before our final presentation 2010 – they will have an international conference about post-mining landscapes in September 2009. Actually IBA is arranging the conference. IBA would like to invite other regions to present their network of mining-regions - the post-mining alliance - on the first conference day. IBA would be happy to share all the knowledge about international projects concerned with post-mining landscapes.
